US Thematic Views

Shareholder activism: What investors seek, which companies are targeted, and how stocks perform

- Shareholder activism surged during 2022 but the pace moderated in 1Q 2023. Activists launched 148 campaigns against 120 distinct US corporations during 2022, a roughly 20% year/year jump, ranking among the top 5 most active years since 2006. During 1Q 2023, investors launched 27 campaigns against 26 companies, a 24% decline from 4Q 2022.
- A changing regulatory landscape and an uncertain macro environment should support shareholder activism in 2023. The Universal proxy took effect last fall and will embolden activists during the upcoming proxy season. The valuation decline and increased cost of capital means activist investors will focus on profitability and idiosyncratic opportunities of potential targets.
- Our analysis covers 2,142 shareholder activism campaigns launched since 2006 with a corporate valuation demand against Russell 3000 companies.
- For INVESTORS: The median stock targeted by activist investors outperformed its sector by 3 pp in the week after the launch of a campaign. However, excess returns were short-lived and typically turned negative after six months. While 69% of targeted stocks outperformed during the first week, after one year only 42% of stocks outperformed their respective sectors and the median stock lagged by 5 pp. A wide performance distribution exists for both successful and unsuccessful activist campaigns and varies by type of activist demand. While the median activist target lagged its sector, the average activist target outperformed by 4 pp over 12 months. The asymmetric nature of returns suggests that "piggyback" portfolio managers with a consistent approach to investing in activist targets can generate positive returns over time.
- For MANAGEMENTS: We identify four metrics relative to the sector median that are associated with an increased likelihood of becoming an activist target: (1) Slower trailing sales growth, (2) lower trailing EV/sales multiple, (3) weaker trailing net margin, and (4) trailing 2-year underperformance. Note that low realized sales growth relative to the sector median is the metric most associated with a target company's share price outperformance following the launch of an activist campaign. Exhibit 19 lists 116 stocks that have experienced at least 10 pp slower realized sales growth relative to its sector median over the past 12 months and at least one source of vulnerability.

4. Financial variables relative to sector median associated with an increased likelihood of becoming a target of an activist campaign: (1) slower trailing sales growth, (2) lower trailing EV/sales multiple, (3) weaker trailing net margin, and (4) trailing 2-year underperformance.

Shareholder activism trends

2022 ranked as one of the most active years for shareholder activism: Investors launched 148 campaigns against 120 distinct public US companies during 2022, a roughly 20% year/year increase. Activists in 2022 also increased their focus on large-cap firms. The number of targets with a market cap greater than \$10 billion jumped by 50% year/year to the highest on record (22). The largest targets in 2022 included GOOGL (\$1.2 trillion equity cap targeted on Nov. 15 by <u>TCI Fund Management</u>, 6% return since announcement vs. 4% for Russell 3000), META (\$346 billion, Oct. 24, <u>Altimeter</u>, 68% vs. 10%), and DIS (\$222 billion, Aug. 15, <u>Third Point</u>, -19% vs. -3%). See Appendix A for a list of 179 activist campaigns launched since the start of 2022.

Our analysis of corporate activism activity against Russell 3000 stocks is based on FactSet Sharkwatch data and focused on 2,142 campaigns with a value creation demand launched between 2006 and 1Q 2023. Our objective was to better understand what changes activist investors seek in the stocks they target, the financial metrics that indicate a company is vulnerable, and the share price performance of stocks subject to an activist campaign. See Appendix C for notes on our methodology.

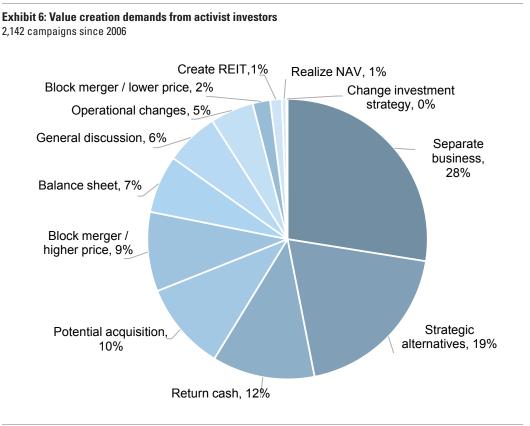

Exhibit 5: Number of companies targeted by activist investors by market cap see Appendix C for notes on methodology

Source: FactSet, Goldman Sachs Global Investment Research

The most frequent activist investor demand involved in 28% of campaigns since 2006 has been for companies to separate its business. Other common demands include (1) review strategic alternatives (19%), (2) return cash to shareholders (12%), (3) block a proposed merger or acquisition (12%), (4) become a target of a potential

acquisition (10%), and (5) increase or decrease leverage (7%). Specific demands such as realize NAV, create a REIT, or change investment strategy are less common, along with operational changes and a general discussion of strategy (<u>Exhibit 6</u>).

Source: FactSet, Goldman Sachs Global Investment Research

The sector composition of activist campaigns differs from the sector composition of the S&P 500 (Exhibit 7). Over the past five years, activists targeted Consumer Discretionary (19% of activist campaigns vs. 11% of the S&P 500 index weight), Energy (10% vs. 4%), and Real Estate (7% vs. 3%) more than their index weights. In contrast, Info Tech represented a smaller share of activist campaigns (15% vs. 26% index weight).

Activist investors during 2022 launched 30 campaigns (21% of total) against Consumer Discretionary firms and 28 campaigns (19%) against Info Tech firms.

Hasbro (\$13 billion equity cap) was the largest Consumer Discretionary company targeted in 2022. Alta Fox Capital Management launched a <u>proxy fight</u> that urged management to enact operational changes such as establishing a disciplined capital allocation framework, and encouraged the company to divest its Wizards of the Coast division. Salesforce (\$147 billion) was the largest Info Tech company targeted last year. Starboard Value <u>seeks</u> operational changes to improve the company's mix of revenue growth and profitability. Given the sharp share price declines since the S&P 500 peaked on January 3, 2022, firms in perceived growth sectors such as Communication Services (-28% return), Consumer Discretionary (-29%), and Info Tech (-14%) will likely face continued shareholder pressure, especially those with low profitability.

		tor composit activist targe		5 year average	Activist target

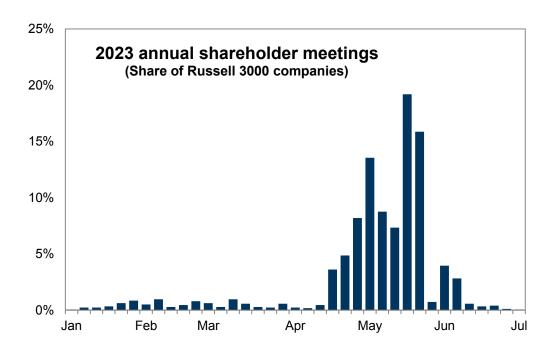

Exhibit 7: Sector composition of activist targets (share of campaigns) campaigns since 2006

Source: FactSet, Goldman Sachs Global Investment Research

Shareholder activism in 2023

The bulk of 2023 proxy season is soon approaching. 8% of Russell 3000 companies will hold their annual shareholder meetings in the last week of April and 65% of Russell 3000 companies will hold their annual meetings during the month of May.

Exhibit 8: Annual shareholder meeting date among Russell 3000 companies

We expect shareholder activism to remain popular during 2023 as investors adapt to regulatory changes and managements navigate a macro backdrop characterized by heightened recession risk and flat equity market returns. Activists launched 27 campaigns against 26 companies during 1Q 2023. Notable targets this year include Disney (Trian Partners) and Salesforce, in which five separate activist investors have accumulated positions (Elliott Investment Management, Inclusive Capital, Starboard Value, Third Point, and ValueAct Capital Partners).

One interesting development in 2023 has been the speed of capitulation by management teams. In several high profile attacks, companies have announced their intention to implement several of the actions proposed or advocated by activists, thereby nullifying the need for those investors to continue to agitate for change. In the first quarter, Trian Partners <u>withdrew</u> its Disney board nominations following the company's announcement of new operating initiatives. Elliott Management also launched and <u>ended</u> its campaign against Salesforce after the board elected a director from ValueAct.

Two new developments from the SEC – <u>universal proxy</u> and amendments to <u>Rule</u> <u>14a-8</u> – should support shareholder activism this year by easing barriers for launching a campaign and marginally increasing activists' willingness to threaten and pursue proxy contests to meet their demands. First, starting last fall shareholders voting by proxy have been allowed to choose among a combination of management and dissident director candidates with a universal proxy card. This change reduces the cost of launching a proxy campaign and increases the probability of at least one dissident nominee getting elected to the board of directors. Previously, shareholders voting by proxy could vote from either the company's slate or the activist's slate of nominees, but not a combination of the two. Second, the SEC is also expected later this year to finalize amendments to the shareholder proposal rule (Rule 14a-8) later this year, which would make it more difficult for companies to exclude shareholder proposals in proxy statements.

Our forecast for flat S&P 500 returns this year underscores the importance of alpha over beta and highlights the need for successful stock picking compared with last year when equity returns were more macro-driven than usual. The S&P 500 P/E multiple ranks at the 86th percentile vs. history (18x), the cost of capital has increased substantially, and economic growth has decelerated in 2023, so investors will focus on near-term corporate profitability. For example, activists might urge companies to consider spinoffs to improve margins and boost valuations (see <u>Revisiting our</u> recommended playbook for investing in spinoffs).

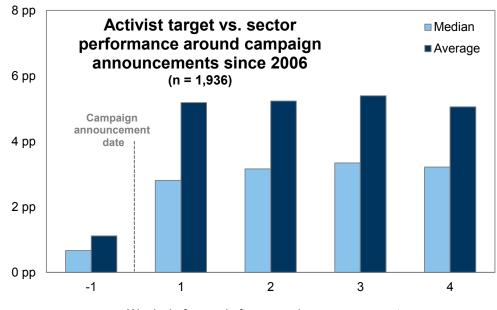

Performance of stocks targeted by activist investors

The typical company targeted by an activist investor has outperformed its sector during the weeks immediately following a campaign announcement (Exhibit 9). Since 2006, 69% of targeted stocks outperformed their sector during the first week after a campaign was launched. Targets outperformed their sector by a median of 3 pp and an average of 5 pp.

Positive excess returns can also be observed before a campaign is launched.

Activist targets outpaced their sector by 1 pp with a 58% hit rate during the week before a campaign announcement. Gains during this period may reflect activists building their stakes and perhaps the market reacting to rumors. Investors are required to complete a Schedule 13D filing and disclose their positions within 10 days of accumulating more than 5% of a company's voting class.

Exhibit 9: Short-term performance of companies targeted by activist investors

Weeks before and after campaign announcement

Source: FactSet, Goldman Sachs Global Investment Research

Despite the recent popularity of shareholder activism and the initial positive share price reaction to the news of a campaign, the median targeted company actually underperformed its sector over the longer term (Exhibit 10). Excess returns appear short-lived and typically turned negative after six months. After 1 year, only 42% of stocks had outperformed its sector and the median stock underperformed by 5 pp. At the 2-year mark, only 40% of targets outperformed and the typical stock lagged by 13 pp. The magnitude of returns were similar across successful and unsuccessful campaigns. However, although *median* excess returns are negative, *average* long-term excess returns are positive.

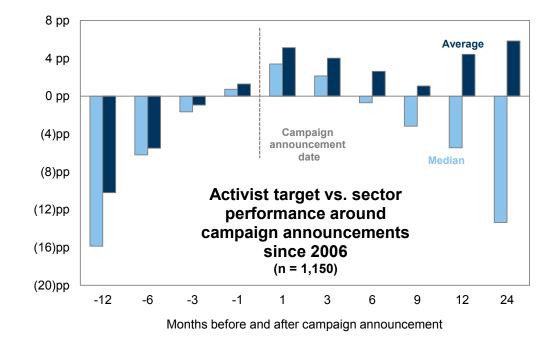

Exhibit 10: Performance of companies targeted by activist investors

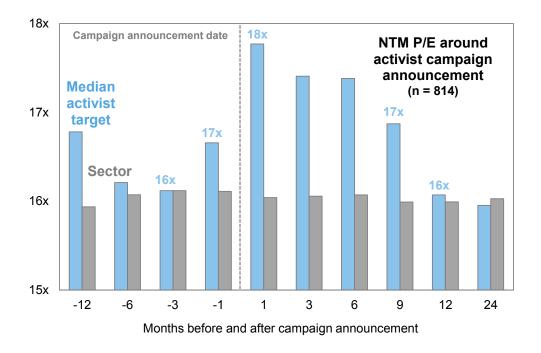

Source: FactSet, Goldman Sachs Global Investment Research

There are several possible explanations for this divergence between short-term and long-term performance. Academic research reveals a lack of consensus on the long-term impact of shareholder activism. First, the holding period for activist investors varies and an investor can generate positive returns even though the median stock underperforms its sector. Second, the market might price an overly optimistic outlook at the time of announcement, which normalizes over time. A literature review by <u>Rafaqat et al. (2022)</u> analyzed more than 100 studies and concluded that shareholder activism may have a positive, negative, or insignificant effect on a targeted firm's fundamental and price performance.

The initial boost to the median target's forward P/E valuation after an activist launched a campaign tends to fade over time (Exhibit 11). The median company targeted by an activist investor traded at a 16x forward P/E three months before the announcement of an activist campaign and at an 18x forward P/E one month after a campaign was launched, reflecting a 10% multiple expansion. However, after one and two years, the P/E multiple of the median target actually reverted to 16x. In contrast, the median sector traded at a stable 16x P/E during this entire period.

Exhibit 11: Forward P/E: Median activist target vs. sector

campaigns since 2006

Source: FactSet, Goldman Sachs Global Investment Research

Fundamentally, there is no material improvement in expected forward sales growth after the involvement of an activist investor (Exhibit 12). One month before an activist campaign is launched, expected sales growth for the median company targeted by an activist investor equaled 5% (vs. 4% for the sector). One and two years after the announcement of an activist campaign, expected sales growth for the median target fell to 4%, matching the sector's expected growth rate. The lack of sustained boosts to a company's valuation or fundamentals helps explain the lack of long-term positive excess returns.

Source: FactSet, Goldman Sachs Global Investment Research

Opportunities for outperformance

(1) Activist Portfolio

Although the *median* activist target underperformed its sector after 12 months, the *average* activist target outperformed by 4 pp. This discrepancy between the average and median activist target can be explained by the asymmetric nature of returns, in which a few instances of extreme positive outperformance can offset the median target's underperformance. Therefore, portfolio managers with a consistent approach to investing in activist targets can generate positive returns over time.

To illustrate this, an equal weight portfolio of companies targeted by activist investors has outpaced the Russell 3000 by an annual average of 3 pp since 2006. To create our activist portfolio, we tracked the daily performance of the average activist target in an equal-weight portfolio. The strategy involved investing in the target company the day a campaign is announced and holding the position for a maximum of 12 months.

Aggregate activist returns have closely tracked the performance of our Value factor. Intuitively, activist investing resembles value investing because activists often seek to influence or catalyze change to address sources of a company's chronic underperformance and generate shareholder value.

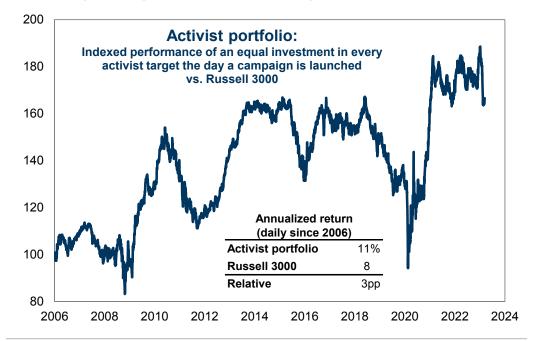

Exhibit 13: An equal-weight portfolio of activist targets has outperformed the Russell 3000

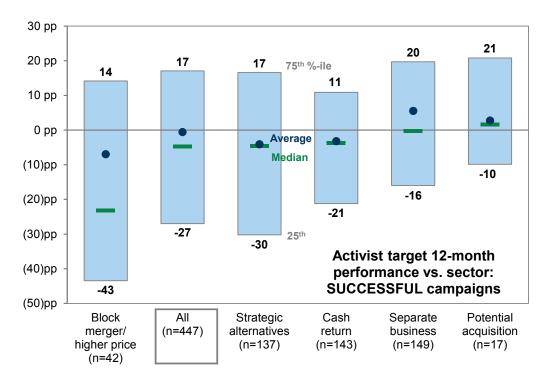

Source: FactSet, Goldman Sachs Global Investment Research

(2) Wide distribution of outcomes

The distribution of target vs. sector 12-month returns is wide and varies by both the demand type and the outcome, offering stock-pickers a large opportunity set.

The median target of a successful acquisition campaign, in which the target was acquired by the activist investor, tended to outperform the median targets of other campaigns since these companies often benefit from an offer price premium. Typical excess returns equaled 2 pp and returns at the 75th percentile equaled 21 pp, the greatest amount generated among the various demands (<u>Exhibit 14</u>). Returns at the 25th percentile equaled -10 pp. This was the only category of activist campaigns in which the median target outperformed in both the short- and long-term. For example, TIF received and accepted LVMH's unsolicited, non-binding <u>proposal</u> to acquire the company. TIF outperformed its sector by 7 pp 12 months after the proposal announcement in October 2019.

some campaigns may have multiple demands

Source: FactSet, Goldman Sachs Global Investment Research

In contrast, the median target of an unsuccessful campaign to separate the business tended to suffer poor returns (<u>Exhibit 15</u>). These companies were likely targeted due to investor concerns about lagging share prices, high costs, and/or low margins. For example, Starboard Value <u>called</u> for Dollar Tree (DLTR) to sell its underperforming Family Dollar business in 2019 but eventually dropped its challenge. DLTR lagged the broader Consumer Discretionary sector by 27 pp 12 months after the launch of the campaign.

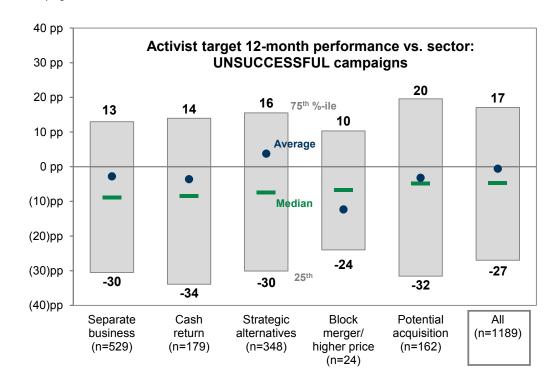

Exhibit 15: Performance distribution of unsuccessful activist campaigns campaigns since 2006

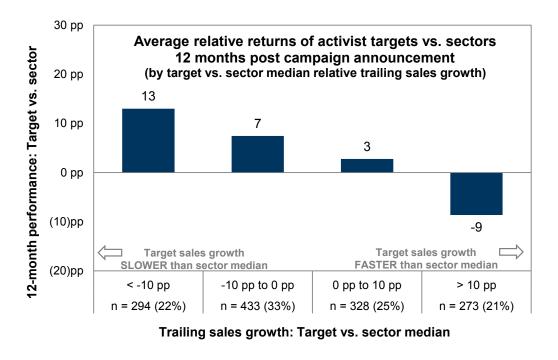

some campaigns may have multiple demands

Source: FactSet, Goldman Sachs Global Investment Research

(3) Favorable target attribute

Slower realized sales growth relative to the sector median is associated with target companies outperforming at the 1-year mark. The market consistently undervalues low expectations, so laggards have a greater opportunity for outperformance. The 12-month outperformance hit rate for stocks with slower realized sales growth relative to the sector median equaled 45% while the hit rate for stocks with faster realized sales growth relative to the sector median equaled 39%. On average, stocks with realized sales growth at least 10 pp slower than the sector median outperformed their sectors by 13 pp. In contrast, stocks with realized sales growth more than 10 pp faster than the sector median underperformed by 9 pp. This relationship between slow sales growth and outperformance was even evident during the extended Growth stock rally from 2016 to 2020.

Exhibit 16: Targets with slower sales growth relative to sector median tend to outperform after 12 months campaigns since 2006

A guide for managements: Identifying sources of vulnerability

We utilized a probit model to analyze the performance and fundamental characteristics most associated with companies targeted by activist investors. Our universe consisted of Russell 3000 companies since 2006. See Appendix C for more details on our analysis.

We identified four financial variables relative to the sector median that are associated with an increased likelihood of becoming a target of an activist campaign: (1) slower trailing sales growth, (2) lower trailing EV/sales multiple, (3) weaker trailing net margin, and (4) trailing 2-year underperformance.

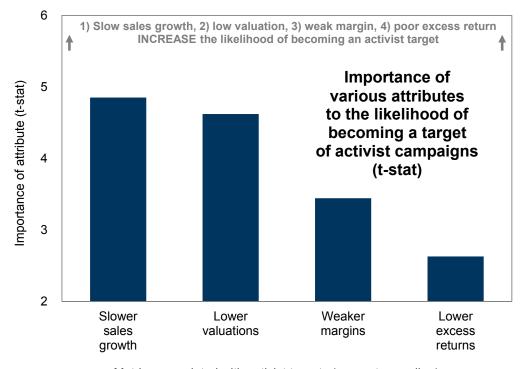

Variable relative to sector median	Coefficient (n = 33	p-value ,932)
Intercept	-1.747	<.0001
Growth		
Trailing EPS growth	0.000	0.545
Trailing sales growth	-0.004	<.0001
Performance		
Trailing 1-year performance	-0.062	0.193
Trailing 2-year performance	-0.076	0.009
Profitability		
Trailing net margin	-0.003	0.001
Trailing ROE	0.000	0.765
Valuation		
Trailing EV/sales	-0.061	<.0001
Size		
Market value	0.001	0.018

Exhibit 17: Sources of vulnerability for a potential target

Source: Compustat, FactSet, Goldman Sachs Global Investment Research

For company managements, these four attributes represent potential sources of vulnerability that might prompt an activist attack. According to our probit model, sales growth has been the most important variable in determining an activist target, followed by EV/sales valuation.

Exhibit 18: Importance of characteristics associated with activist targets

Metrics associated with activist targets (vs. sector median)

Source: Compustat, FactSet, Goldman Sachs Global Investment Research

Of the 733 campaigns since 2006 with sufficient data for all four metrics, 89% had at least one identified source of vulnerability and 70% had at least two.

- 67% of targets underperformed their sectors during the 2 years prior to the campaign.
- 57% traded at an EV/sales discount.
- 55% had slower sales growth.
- 47% had weaker net margins.

Exhibit 19 identifies 116 stocks in the Russell 3000 index that may be susceptible to a campaign by an activist investor. These firms have a market cap greater than \$5 billion, at least one source of vulnerability based on our model, and experienced at least 10 pp lower realized sales growth relative to its sector median during the trailing 12 months. The median firm grew sales by -5% (vs. +10% for the Russell 3000 median), trades at 2.7x EV/sales (vs. 3.3x), has trailing net margins of 16% (vs. 14%), and has returned -1% during the last 2 years (vs. +7%). The 31 firms in italics have previously been targeted by activist campaigns.

Exhibit 19: Russell 3000 stocks vulnerable to shareholder activism (ranked by market cap within sector)

firms greater than \$5 billion in market cap, at least one source of vulnerability, trailing sales growth at least 10 pp slower than sector median; previous activist targets in italics

Appendix C: Notes on methodology

Activism data

Our database of corporate activism activity against Russell 3000 stocks is based on FactSet Sharkwatch data. FactSet sources a combination of company and dissident filings, press releases, financial news, company websites, and financial trade publications. Each campaign is categorized with an objective (e.g., maximize shareholder value) and if applicable, a corporate value creation demand (e.g., return cash) or governance demand (e.g., compensation enhancements). A campaign is defined by FactSet when a shareholder makes public demands of the company. As a result, any shareholder who states various measures they believe the company should make is considered an "activist investor."

Our analysis covered 2,142 campaigns announced since 2006 that had a value creation demand. Our objective was to better understand how activist investors seek to create value via fundamental changes in a company. We acknowledge that activist investors can launch campaigns for a variety of other reasons, such as to remove director(s) from a board or to request disclosure reports. However, we found similar results when we expanded the universe to include these other types of campaigns.

For each analysis, we utilized as much of the dataset as possible. For example, when analyzing the performance of targets 1 year after a campaign announcement, we included all companies with performance data at the 1-year mark. When analyzing the performance of targets 1 week after a campaign announcement, we included all companies with performance data at the 1-week mark, regardless of if there is performance data beyond that point.

Probit model on target selection

We utilized a probit model to assess the impact of various absolute and relative fundamental and performance metrics on (1) target vs. sector outperformance and (2) target selection. We considered the following trailing metrics at the time of campaign announcement: trailing 2-year performance, EV/sales, EPS growth, sales growth, net margin, ROE, and equity cap (size). The interpretation of the coefficients in a probit regression is not as straightforward as the interpretation of linear regression coefficients. Therefore, we focused on the sign of the coefficient estimate and the coefficient's significance. A positive coefficient indicates that an increase in a predictor is associated with an increase in probability of the designated outcome.

Our starting universe consisted of monthly Compustat performance and fundamental data for Russell 3000 companies since 2006. Since fundamental data do not typically change on a month-by-month basis, we calculated each stock's yearly average of each metric for the regression. A similar process was applied to calculate metrics for the sector median. The dataset ultimately used for the model consisted of yearly fundamental and performance data for Russell 3000 constituents relative to their sector medians. A company was flagged as a target if a campaign was launched during the

year. Running the model with time fixed effects did not change the coefficient sign or significance of the four variables.

Reg AC

We, David J. Kostin, Jenny Ma, Ben Snider, Ryan Hammond, Cormac Conners, Lily Calcagnini and Daniel Chavez, hereby certify that all of the views expressed in this report accurately reflect our personal views, which have not been influenced by considerations of the firm's business or client relationships.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

Disclosures

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts** is analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. Australia: Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of Global Investment Research of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. Brazil: Disclosure information in relation to CVM Resolution n. 20 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Resolution n. 20, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. Canada: This information is being provided to you for information purposes only and is not, and under no circumstances should be construed as, an advertisement, offering or solicitation by Goldman Sachs & Co. LLC for purchasers of securities in Canada to trade in any Canadian security. Goldman Sachs & Co. LLC is not registered as a dealer in any jurisdiction in Canada under applicable Canadian securities laws and generally is not permitted to trade in Canadian securities and may be prohibited from selling certain securities and products in certain jurisdictions in Canada. If you wish to trade in any Canadian securities or other products in Canada please contact Goldman Sachs Canada Inc., an affiliate of The Goldman Sachs Group Inc., or another registered Canadian dealer. Hong Kong: Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. India: Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. Japan: See below. Korea: This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. Russia: Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. Singapore: Goldman Sachs (Singapore) Pte. (Company Number: 198602165W), which is regulated by the Monetary Authority of Singapore, accepts legal responsibility for this research, and should be contacted with respect to any matters arising from, or in connection with, this research. Taiwan: This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. United Kingdom: Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union and United Kingdom: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council (including as that Delegated Regulation is implemented into United Kingdom domestic law and regulation following the United Kingdom's departure from the European Union and the European Economic Area) with regard to regulatory technical standards for the technical arrangements for objective presentation of investment

recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan Type II Financial Instruments Firms Association, The Investment Trusts Association, Japan, and Japan Investment Advisers Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by Global Investment Research. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (<u>https://www.sipc.org</u>).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

We and our affiliates, officers, directors, and employees will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research, unless otherwise prohibited by regulation or Goldman Sachs policy.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is focused on investment themes across markets, industries and sectors. It does not attempt to distinguish between the prospects or performance of, or provide analysis of, individual companies within any industry or sector we describe.

Any trading recommendation in this research relating to an equity or credit security or securities within an industry or sector is reflective of the investment theme being discussed and is not a recommendation of any such security in isolation.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors.

Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and

https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by Goldman Sachs Global Investment Research may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.
